# EWKLIS

Italian Solutions Manufacturer

Fiumicino Airport

**EUKLIS srl**, based in Trezzano sul Naviglio, is an Italian company with the mission of producing technological solutions for security, videosurveillance, access control and telecomunications.

**EUKLIS** is a registered brand since 2007, which has acquired increasing market shares in recent years.

In Italy, **EUKLIS** is among the accredited brands of some of the most important critical infrastructures for security: 10 of the major Italian airports, 7 highway authorities, 20 among the most important governmental buildings.

Furthermore, many industrial sites, 5 of the highest towers in Italy and more than 500 cities have adopted **EUKLIS** cameras for their security.

Outside of Italy, **EUKLIS** is well known due to important projects realized in Spain, Portugal, France and all the Middle East.

«The innovation of our way of thinking the security of people and critical infrastructures, consists in the inversion of the classical approach which chases technology and tries to adapt in order to create an original product, maybe unique for the market, into an approach which imagines a solution for a specific need and plans a product using the best available technologies of the market.

EUKLIS is an Italian company which goes beyond technology and imagines and plans solutions.

**EUKLIS is Security Continuity**, because security is a value which can not be realized with disposable products.

**EUKLIS is Smart**, because technology has to simplify the development of the tasks of a security operator.

**EUKLIS is Competitiveness**, because the efficiency of an investmeent is measured in time and not only with the parameter of price »

# Planning and Consultancy

A security system not only consists in connected products, but in processes controlled by human being through technologies.

EUKLIS' planning starts from the design of the system for the support of those processes, until the realization of software programs when products in the market are not available. EUKLIS, thanks to a laboratory of engineers with long-time experience in developing products, in particular for the security market, is able to offer services of consultancy, projects and IT integrations, using the most advanced programming techniques.

# Manufacturing Process

For the basic components, sensors and DSP, **EUKLIS** has no doubts: the best quality of images is guaranteed by the exclusive use of Sony components.

The pre-assembly is realized within Korean factories where employees of **EUKLIS** take care of every step of that phase.

Finally, the last assembly, with the software, the carpentry and the body, realized in Italy, takes place in Trezzano sul Naviglio, close to Milan, where great attention is dedicated to the quality control. The **EUKLIS** production process always starts with the analysis of a need not satisfied by the products available on the market.

In the research and development laboratories, we imagine the solution, we write all the software and the firmware, we design the hardware thanks to the most advanced development techniques and we realize the prototypes.

# Products and Solutions

**EUKLIS'** catalogue includes products and solutions.

All our solutions may be customized and integrated with what other manufacturers propose.

**EUKLIS'** cameras use only long time life components at high perfomance guaranteed by Sony.

The software and firmware are completely realized by **EUKLIS** which guarantees quality and perfomance related to issues with Cyber Security.

A continuos certification program guarantees compatibility with standars as Onvif and the most important manufacturers.

Data sheets of all products are on the website:

#### FaRe Face Recognition Suite

FaRe is an innovative suite of advanced functions for the security and is based on face biometric data, captured by the video streams of videosurveillance cameras.

FaRe functions as a stand-alone platform, or can be integrated in VMS, Access Control systems or PSIM of the major manufacturers.

FaRe uses the most recent face recognition available technologies.

FaRe can be used for different applications: anti-terrorism, research of suspicious people, monitoring of frequent visitors, visual support to an access control system, control of passports and electronic ID.

FaRe Totem is a small column provided with a 4K2K camera, a mirror monitor, a badge and passport reader for the crossing control, already integrated with the turnstiles of the major manufacturers.

#### KlisHyCloud VideoSurveillance As A Service

KlisHyCloud is a complete line of technologies and services able to guarantee VideoSurveillance As A Service to local police, to surveillance institutes but also banks and store chains. KlisHyCloud Cam is a complete line of high tech cameras which use Stratocast Genetec Cloud protocol and local memorization on SD.

KlisHyCloud Server is ruggedized server with temporary storage functions in the event of a prolonged drop in connectivity.

### **City&Cars** License Plate Recognition Suite

**City&Cars** is a complete suite of advanced functions related to the information given by the number plate.

City&Cars functions as a stand alone platform or can be integrated in VMS, in access control systems or PSIM of other manufacturers.

**City&Cars** supports different brands of LPR cameras such as Tattile, Genetec AutoVu, ARH. City&Cars can be connected to the Italian Ministry Database in order to find information of cars.

**City&CarsLPC** is the **EUKLIS** camera, provided with MULTI-SHUTTER Control up to 1/400000, designed for the capture of plates of cars running at high speed.

**City&CarsSOFT** is the module of software plate recognition to combine with a C&C LPC Cam.

#### Luxury 360 Fisheye Fashion LINE

Luxury 360 is the complete line of panoramic cameras with fisheye lens from 6 to 12 megapixels.

Luxury 360 provides the function of dewarping hardware and is integrated with the most important VMS platforms for a good dewarping software.

Luxury 360 can be supplied 200 colors, can be customized or can be in IK10 version.

Luxury 360 is provided with invisible IR LED.

Luxury 360 is certificated ONVIF and Genetec protocol.

Luxury 360 is ideal for all the internal where the need is to use a limited number of cameras that, at the same time, have an attractive look and a suitable color to the design of the building.

Bank Intesa San Paolo Turin

# KLIS Dome

KLIS Dome is a line of PTZ cameras, ideal when a security operator has to focus distant objectives in big areas with few visibility or in absence of light.

KLIS Dome is a complete line of PTZ cameras from 2 megapixel to 4K2K with optical zoom beyond 30x.

KLIS Dome is available with IR lights integrated and syncronized with the optical zoom of the camera to cover distances to 500 meters.

KLIS Dome is available with fiber optic interface.

KLIS Dome develops functions of advanced video analysis and can be integrated with the most important manufacturers of VMS.

**KLIS Dome** is certificated ONVIF and Genetec protocol.

#### **PROFIBULLET** *Professional Bullet LINE*

**PROFIBULLET** is provided with motorized optic 30x which can be configured by remote and lights which can cover distances of 40, 70 or 100 meters.

**PROFIBULLET** can be fed as a simple bullet via POE .

**PROFIBULLET** for applications near the sea is available in marine version.

**PROFIBULLET** is certificated ONVIF and Genetec protocol.

**PROFIBULLET** is a complete professional line of cameras from 2 to 12 megapixel, created to maintain the same semplicity of installation of bullet cameras, even when the area is distant 100 meters.

City of Bari

#### KLIS Bullet Bullet LINE

Intersec Dubai

KLIS Bullet can develop advanced video analysis integrated with the most important VMS manufacturers.

KLIS Bullet is available in Riloka version, provided with SD card, power back and battery. KLIS Bullet is a complete line of cameras from 2 megapixel to 4K2K varifocal or with motorized optic and integrated illuminators.

KLIS Bullet is available in IK10 version.

**KLIS Bullet** is certificated ONVIF and Genetec protocol.

#### KLIS Minidome Fix MiniDome LINE

**KLIS MiniDome** is certificated ONVIF and Genetec protocol.

KLIS MiniDome can develop advanced video analysis functions with the most important VMS manufacturers.

KLIS MiniDome is a complete line of minidome from 2 megapixel to 4K2K varifocal or with motorized optic and integrated illuminators.

KLIS MiniDome is available in IK10 version.

Venice Airport

#### KLIS Enc Encoder LINE

Milan Subway

**KLIS ENC** is certificated ONVIF and Genetec protocol.

KLIS ENC inside Genetec systems, needs Analog license where the price is a quarter of a regular license. KLIS ENC is the ideal solution for converting analogic cameras and insert within a Network Video Record.

KLIS ENC is able to convert analogic video streams in 4 CIF/960H.

KLIS ENC can be supplied in the configuration of 1 or 4 entries and in the case of PTZ, supports the configuration in daisy chain.
