

Employees on Cloud

*The Hardware-Free Attendance
Detection System via Predictive QR
Code®*

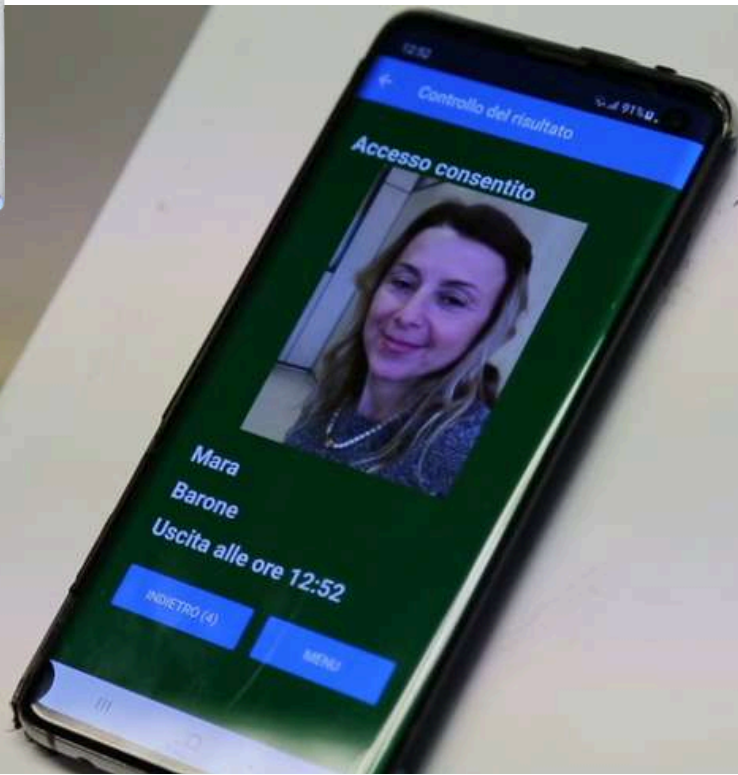

EU **KLIS**

Employees on Cloud is a time and attendance control system that requires no additional hardware and manages attendance, allowing each employee to access their Predictive QR Code® which can be automatically scanned at the entrance by another smartphone/tablet or a common QR Code reader.

Employees on Cloud:

- Contains additional information, allowing employees to enter justifications (absences, delays, etc.).
- Features a chat that enables each employee to communicate with the human resources office and send documents.
- Broadcast messages can be sent to all employees.
- All time stamps can be exported in Excel format.
- The mobile application can be customized with the company's logo.
- Employees on Cloud is suitable and adaptable to any situation: from offices, to construction sites, to remote work. In the latter case, employee registration is done by showing the Predictive QR Code® to the computer's camera.

PREDICTIVE QR CODE® - patented authentication technology

Guest on Cloud manages access through a mobile app directly from the user's smartphone and is based on the Predictive QR Code®, a unique and secure authentication system!

The Predictive QR Code® prevents duplication as it is dynamic: it **changes every 500 milliseconds**, and if copied, it cannot be used because its validity expires with each change. To ensure continuous functionality, the **Predictive QR Code®** can even be read offline, meaning it works when the smartphone has no internet connection.

Employees on Cloud

How it works

After installing the mobile app, Guest on Cloud, on their smartphone, the employee enters the PIN Code received via email/SMS from the company

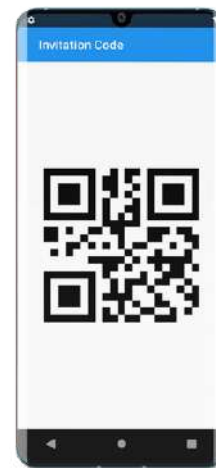

Visitor accepts privacy/safety policies

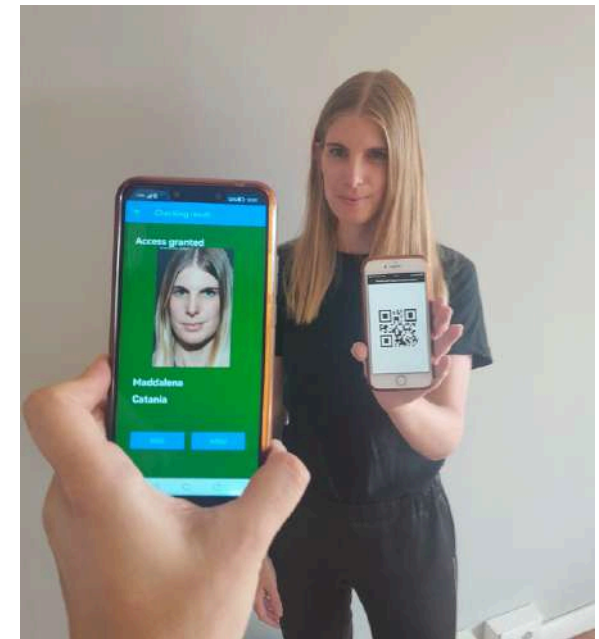

Employee insert required credentials

Employee receives Predictive QR Code®

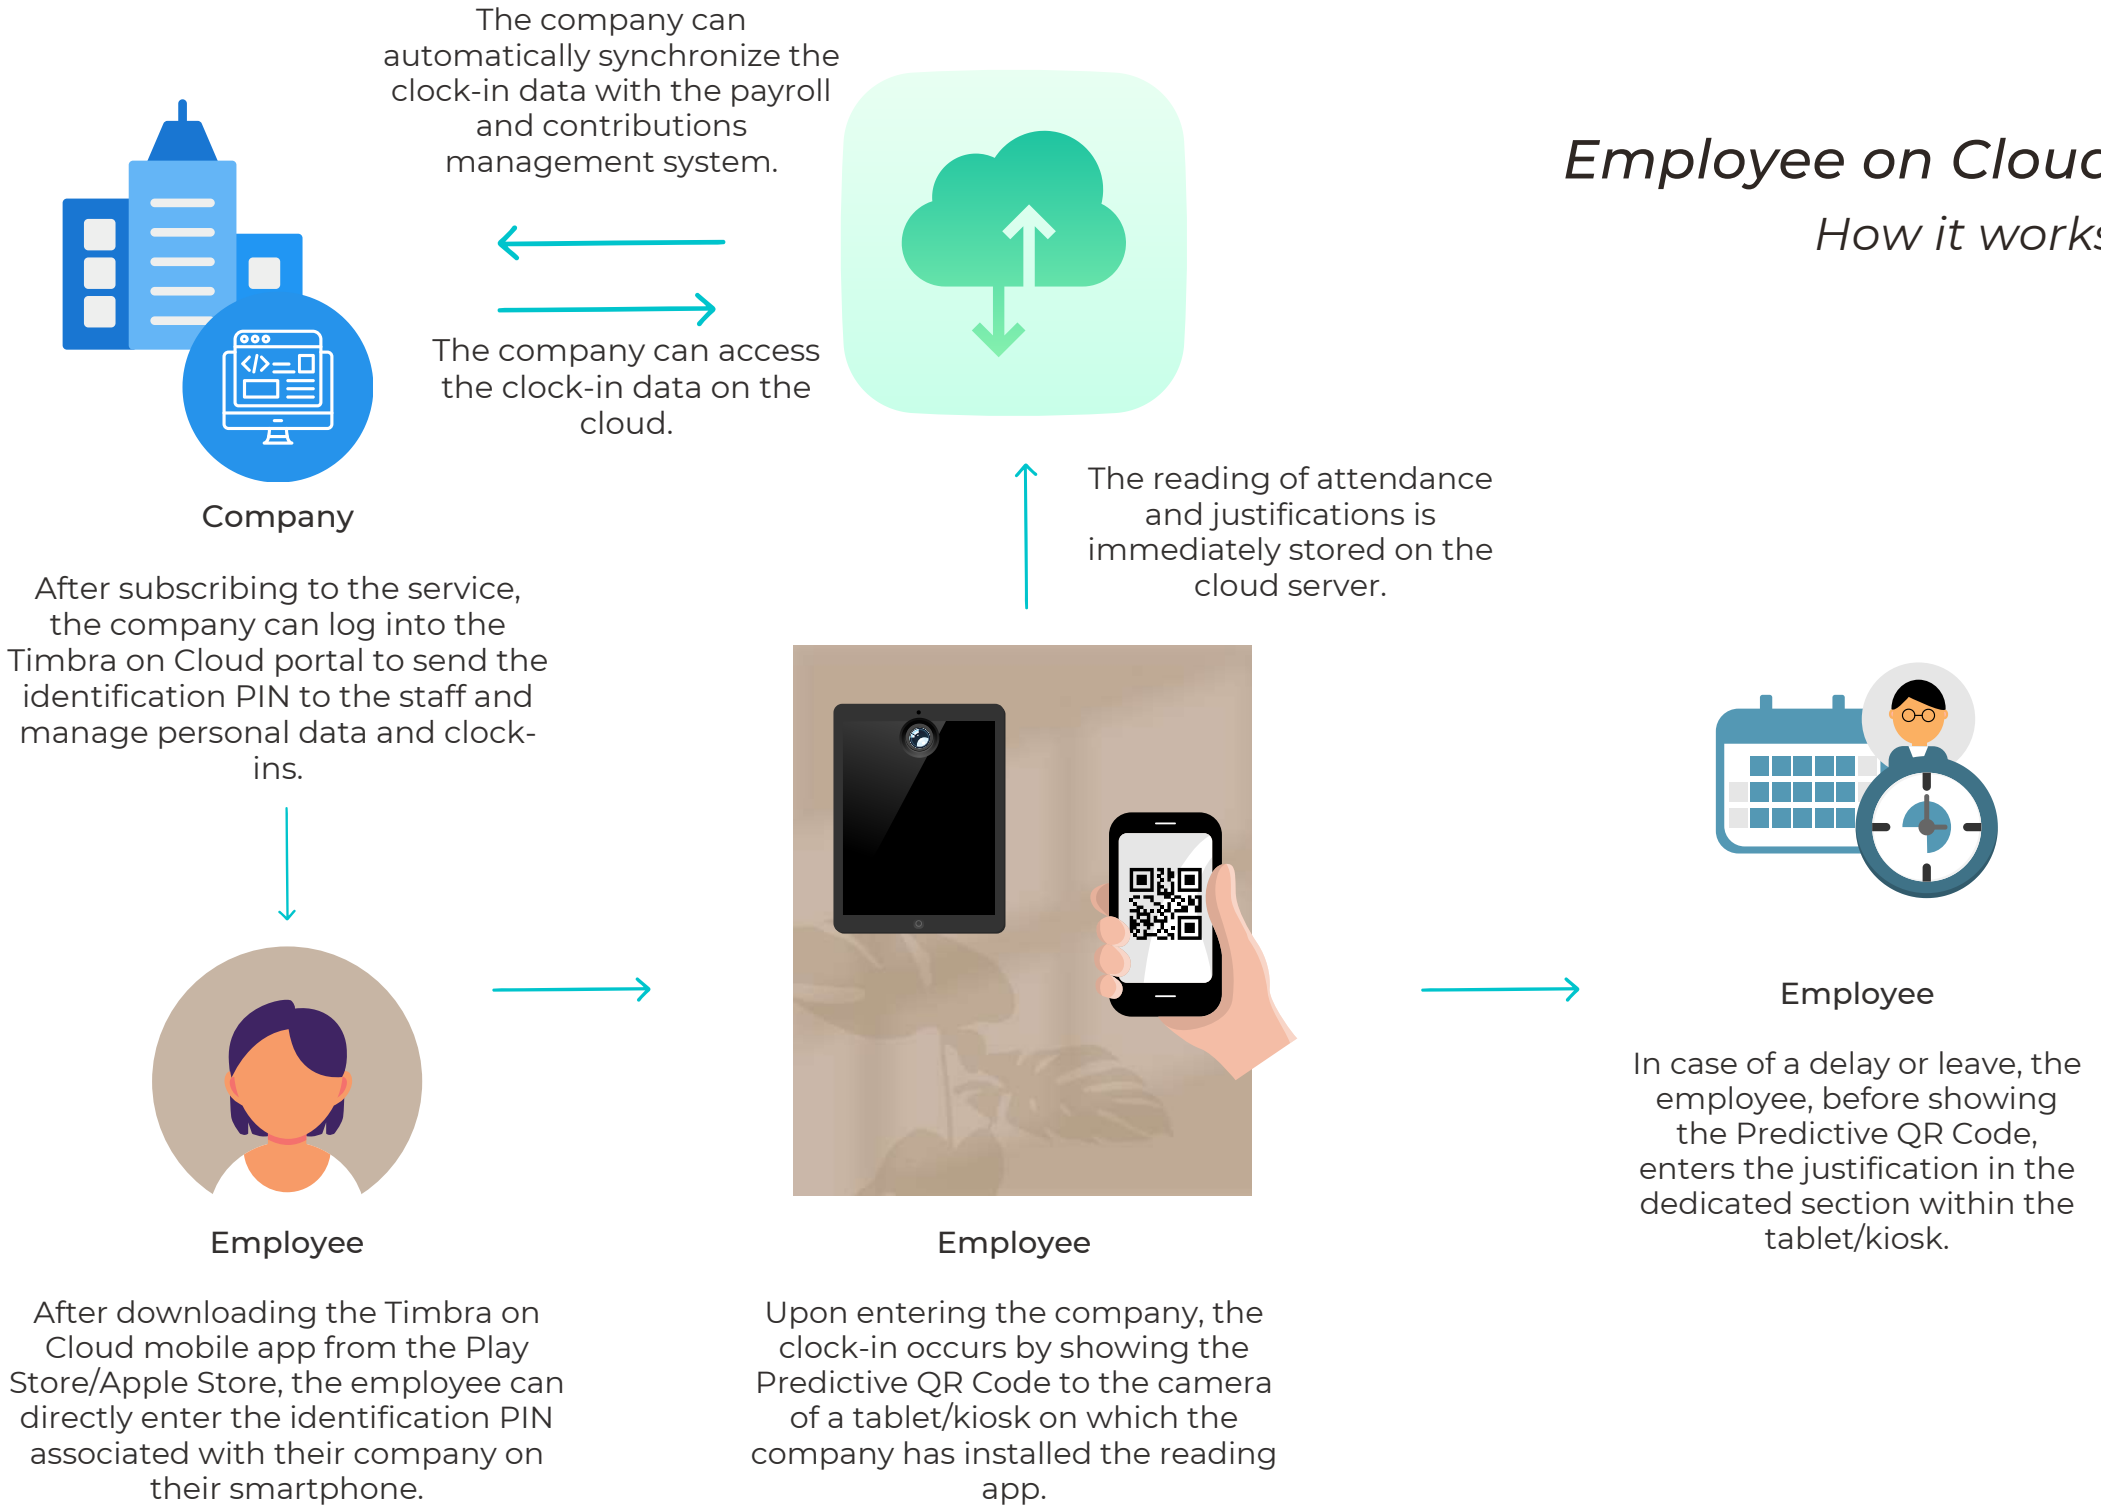

Authentication through Predictive QR Code®

Employee on Cloud

How it works

Company

The company can automatically synchronize the clock-in data with the payroll and contributions management system.

The company can access the clock-in data on the cloud.

The reading of attendance and justifications is immediately stored on the cloud server.

After subscribing to the service, the company can log into the Timbra on Cloud portal to send the identification PIN to the staff and manage personal data and clock-ins.

Employee

After downloading the Timbra on Cloud mobile app from the Play Store/Apple Store, the employee can directly enter the identification PIN associated with their company on their smartphone.

Employee

Upon entering the company, the clock-in occurs by showing the Predictive QR Code to the camera of a tablet/kiosk on which the company has installed the reading app.

Employee

In case of a delay or leave, the employee, before showing the Predictive QR Code, enters the justification in the dedicated section within the tablet/kiosk.
