

Guest on Cloud

*the mobile app for the management of
remote, unstaffed sites*

EUKKLIS

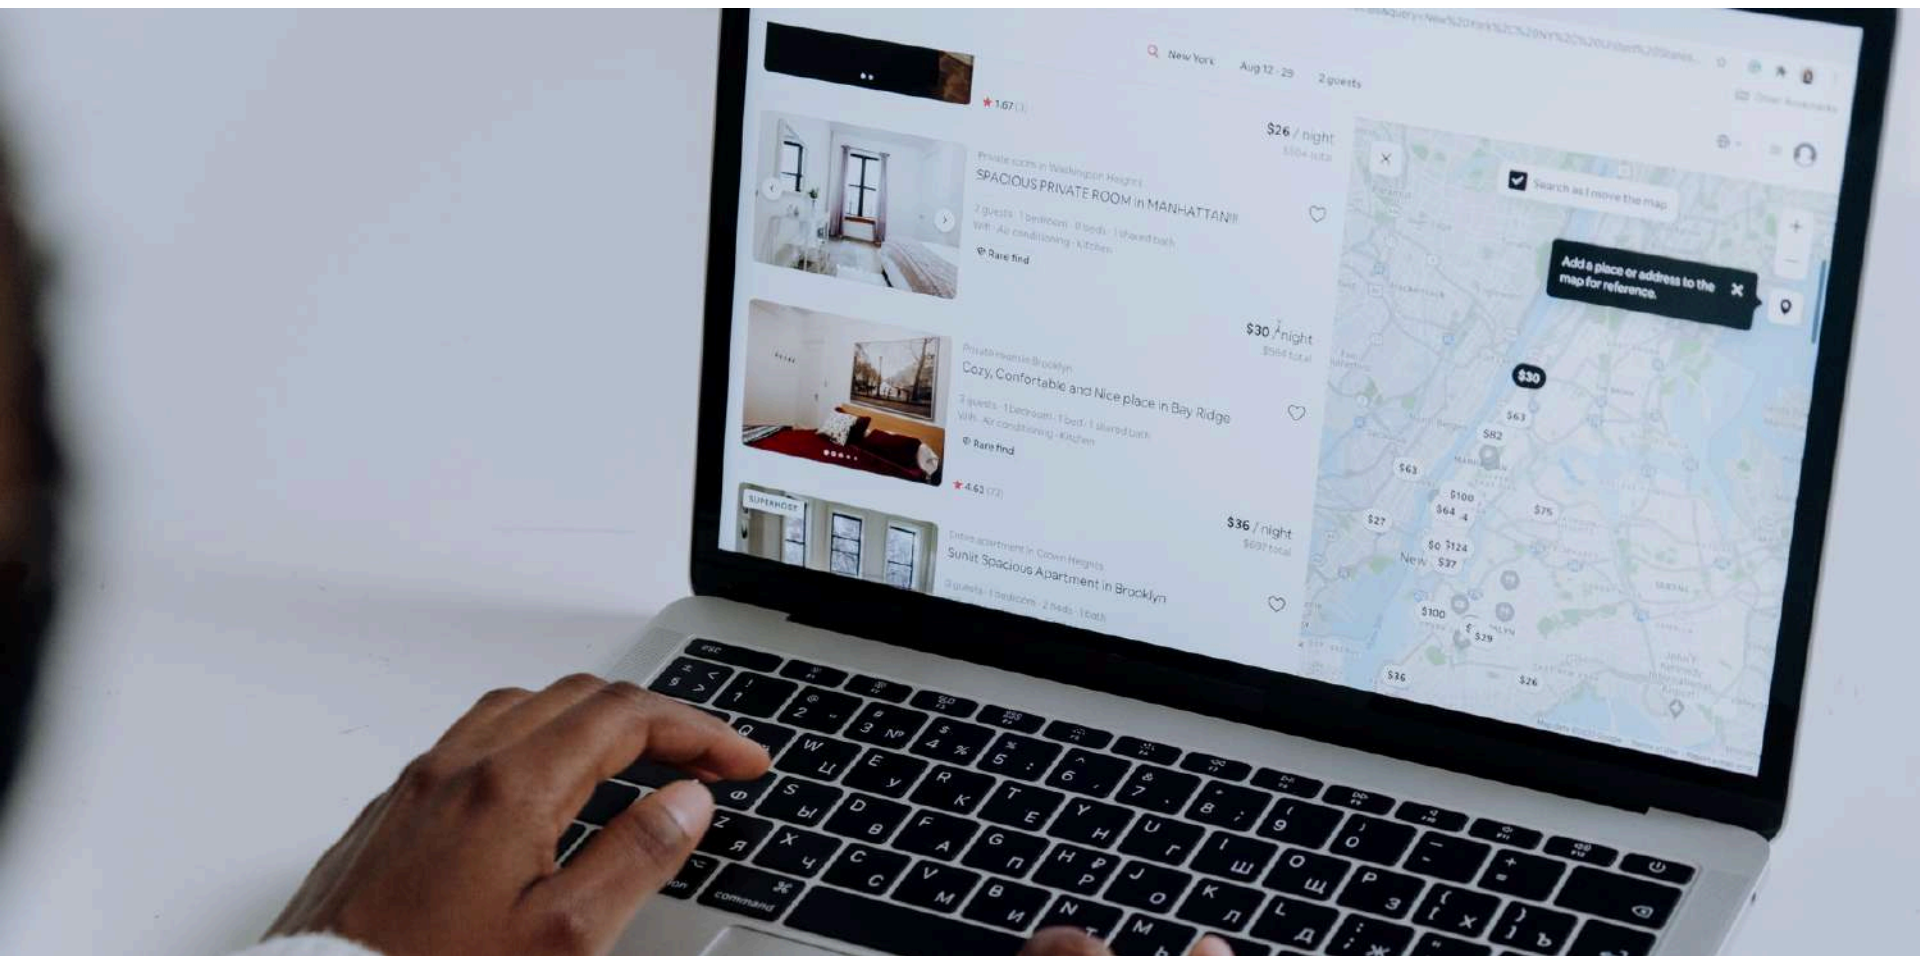

A complete solution for organizations managing unstaffed remote sites.

Unstaffed remote sites are numerous and serve a wide range of purposes: from photovoltaic plants to base radio stations, and even organizations that manage apartment rentals online. The intelligent management of these sites, often distributed extensively across the territory, is crucial not only for optimizing physical security but also for ensuring operational efficiency.

On one hand, organizations that outsource maintenance work to third-party companies want visibility into the authorized personnel performing the tasks. On the other hand, hosts renting multiple apartments, including those via dedicated online platforms, not only want to verify the identity of their guests, but may also seek a more convenient and sustainable system for managing the delivery of physical keys by replacing them with virtual keys, made possible through the Guest on Cloud mobile app.

The Guest on Cloud mobile app utilizes a patented virtual card technology, the Predictive QR Code®.

PREDICTIVE QR CODE® - patented authentication technology

Guest on Cloud manages access through a mobile app directly from the user's smartphone and is based on the Predictive QR Code®, a unique and secure authentication system!

The Predictive QR Code® prevents duplication as it is dynamic: it **changes every 500 milliseconds**, and if copied, it cannot be used because its validity expires with each change. To ensure continuous functionality, the **Predictive QR Code®** can even be read offline, meaning it works when the smartphone has no internet connection.

REGISTRAZIONE

ATTIVAZIONE

The user downloads the Guest on Cloud mobile app and enters the PIN previously received via email/SMS.

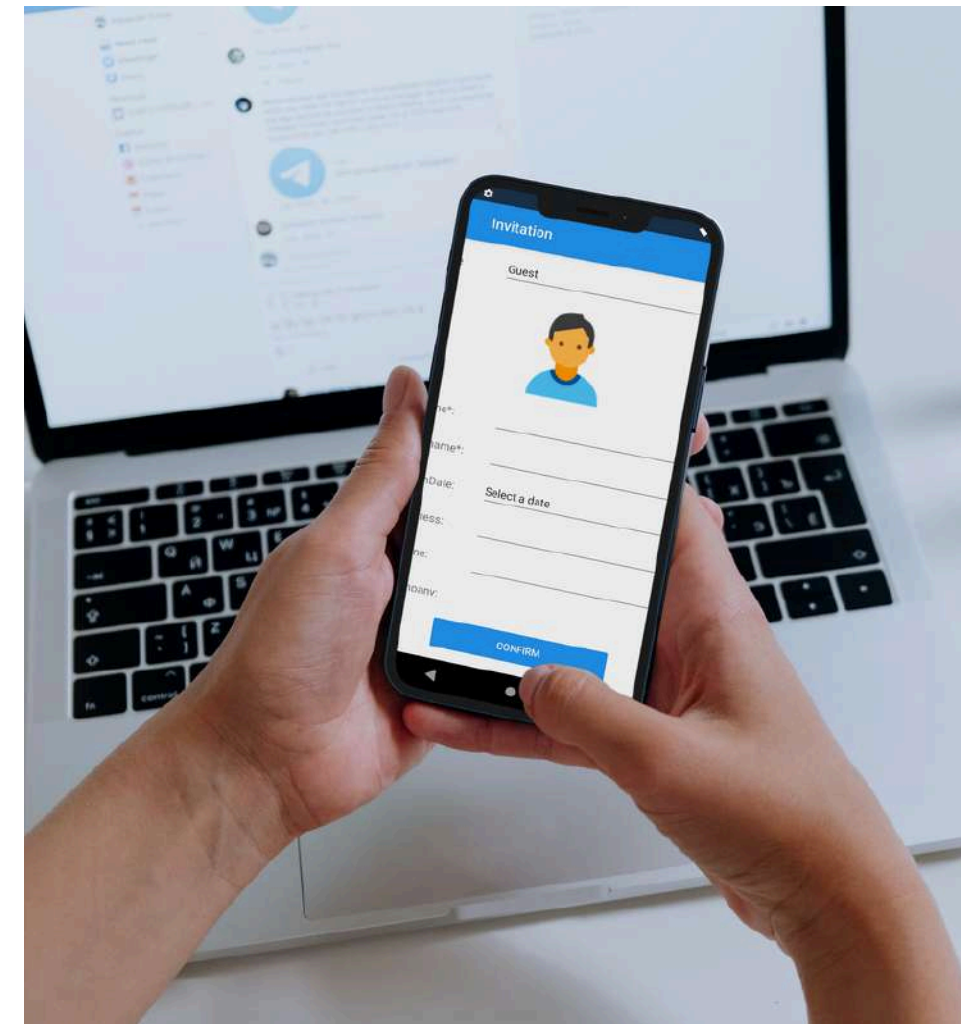

ACCETTAZIONE DELLE POLICY

The user accepts the policies and the rules for performing the work.

CREDENZIALI

The user enters the required personal details. Some of the data may already be pre-filled.

CHIAVE VIRTUALE

The user receives the Predictive QR Code®, which serves as their virtual key to access the remote site.

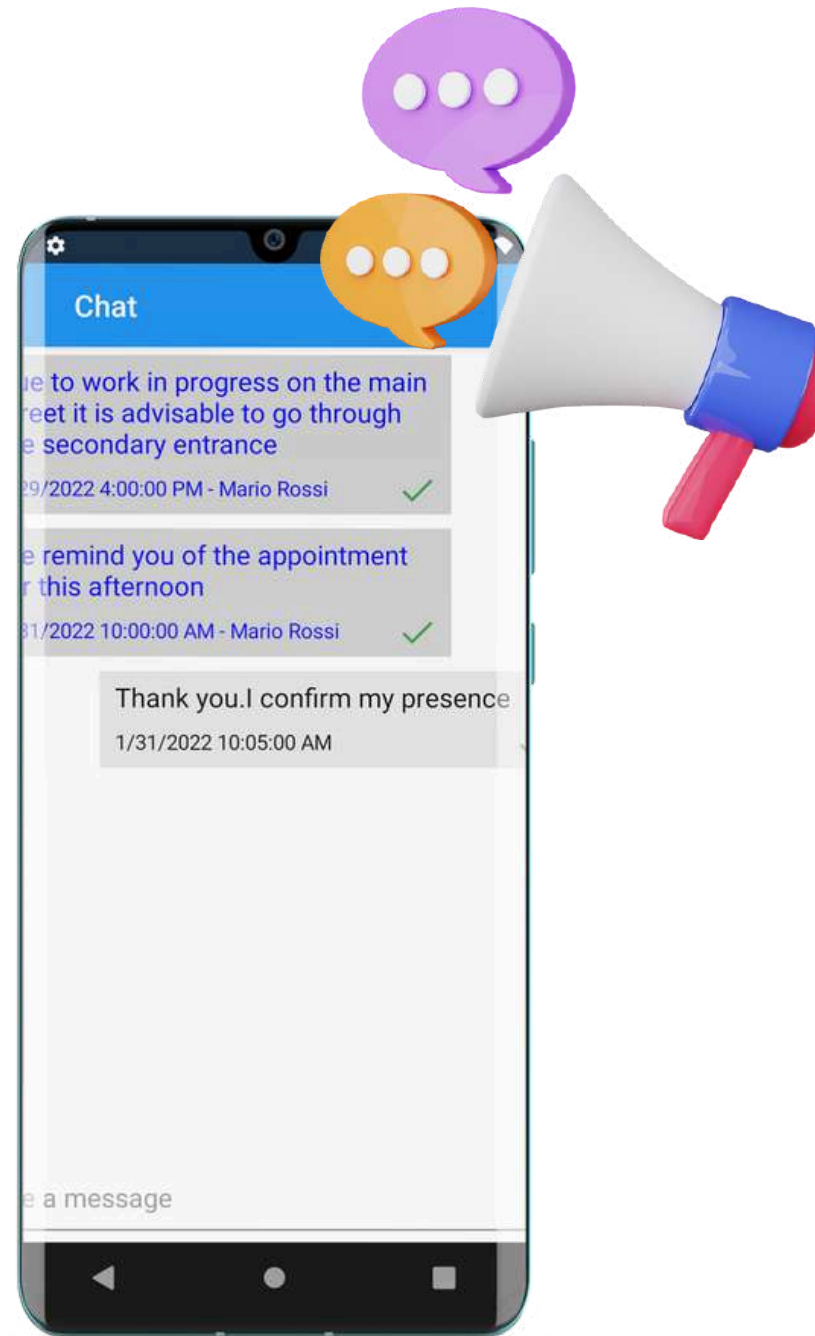

FEATURES GUEST ON CLOUD

Secure, Seamless, and Digital
Authentication via Predictive QR
Code®

- Chat
- Broadcast Messages

- Customizable App
- Training Videos
- Destination Map
- Document Scanning
- Access to Data Post-Registration

Management of Remote Sites on Cloud

Maintenance at radio base stations

Advantages

Mobile app with Predictive QR Code®

SECURE

The Predictive QR Code displayed on the screen changes every 500 milliseconds.

The coding system is managed by the system operator, not by the technology provider.

It also works in offline mode.

AUTHENTIC

The app works only from the owner's smartphone because it is linked to the unique device number.

SMART

It does not require specific hardware for authentication.

It does not require cards or tokens.

FAST

Authentication in less than 1 second

Authentication via smartphone

Instant setup and installation
